

How to use this pack

Download. Unzip. Print. Tab. Replace manufacturer SDS with the can on this machine.

Rev 01 Effective 2026-09-01 Review 2027-09-01 Printed copy uncontrolled

TWO BINDERS, NOT ONE

This zip is the company OH&S program. Tabs 01-22 match Proven sections. The crane site binder (tower, self-erect, or mobile) is a second file for the machine on this project. It lives in folder 22. Do not stuff NOP-TC and load charts into the policy binder.

PRINT ORDER

00-Table-of-Contents.pdf - front of the binder.

00-Binder-tab-inserts.pdf - cut and tape to dividers.

Each numbered folder, in order, behind its tab.

Blank forms from Tab 17 - print what you actually use. Fill on the phone when you can.

Tab 18 - field cards in front, manufacturer SDS behind them in sleeves.

SDS

WHMIS requires the SDS for the product actually on site. The manufacturer PDFs in this pack are common products a crane crew meets in Canada - diesel, hydraulic oil, EP grease, WD-40, wire-rope dressing, battery acid, pumice hand cleaner, shop cleaner. If the drum says something else, that manufacturer's sheet wins. Date-check them. Manufacturers revise SDS.

CONTROL

Revision 01. Effective 2026-09-01. Printed copy uncontrolled. Put your company name on issued policies with the issuer on the live site. Law always wins. Where this program is stricter, this program wins.
